

About Us

Waste4Good (W4G) is an agriculture technology and social enterprise that aims to utilize food waste and address food security through the establishment of sustainable urban and rural garden farming projects.

Our company has been a recipient of both local and international awards and recognition including the Accenture Startup grant thru UP Engineering Research and Development Foundation, Inc. (UPERDFI), the UNDP ISIP-Australian Aid grant and Mindanao's ONLY grantee for DOST WHWise Cycle 2.

Our Technology

Our farms utilize our organic Compost Activator Solution (CAS) that improves soil conditions and support plant growth through utilizing indigenous microbes and biodegradable waste. Our solution is laboratory proven to increase yields and plant growth by 50% over two(2) months of application based on recent trials.

Farm 4 Bayanihan

Farm4Bayanihan (F4B) is an innovative initiative by Waste4Good that empowers local and rural communities to transform waste into valuable resources in good farming. This community-driven program encourages sustainable farming practices by utilizing organic waste to enrich soil, reducing the need for chemical fertilizers, and promoting eco-friendly agriculture. By fostering a spirit of bayanihan, or collective effort, Farm4Bayanihan not only addresses waste management challenges but also enhances food security and supports environmentally-conscious farming, promotes livelihood, and creating a brighter future for communities and the planet.
